Colin
Mechanic
Age – 40
Time with firm – 19 years

I've been working here for about nineteen years, that's not unusual. Most of our customers have been with us a good while too. The way we work is based on trust. Our name is everything to us; whatever department you're in, you're working flat out to make sure the job is done the way the customer wants. That's why they stay with us.

The secret of our success is you

Over four decades we have evolved from a small family business transporting animal foodstuffs to one of the leading transport, cleaning, recycling and surveying companies in Europe.

That hasn't happened by accident. We're still as passionate about meeting the needs of our customers as the day we started. That's how we've grown.

We discovered that the only way to guarantee our customers' expectations were met was to control every step of the operation, so everything we do, we do ourselves.

This means

Our transport service delivers your products on time, every time, safely and securely. We know our customers need versatility and as a result our transport services operate from five sites across the UK and Ireland. We transport a wide range of liquid and powder goods, from foodstuffs and alcoholic drinks to chemicals and industrial products.

We also offer a comprehensive recycling service that includes the mixing, dewatering, injection and top spreading of bio-solids.

Our state-of-the-art cleansing equipment, like our high-pressure water jetting units and skid-mounted vacuum pumps, are operated by staff trained to the highest levels in their speciality. Our high-tech cleansing and screening services are tailored for your needs, not ours.

We know that our customers need the highest quality service. Our engineers and mechanics design and build our tankers, utilising four decades of our on the road experience, so our 200 strong fleet provides the ultimate means of transport in every field we serve.

And, finally, we know that our customers need to work alongside us. From the first contact to the final invoice, we are totally integrated with your operation. We become part of your team, so you can stake your reputation on ours.

Our highly trained and motivated staff can offer you a complete range of in-house cleansing and screening solutions.

That's why we say; you are the reason for our success.

Everything here is geared to meeting the challenge. It means everyone has to share the same can do ethos. It's infectious and there is such a sense of achievement when the job is done.

Key Areas of the Business

Everything here is geared to meeting the challenge. It means everyone has to share the same can do ethos. It's infectious and there is such a sense of achievement when the job is done.

Our People

We are only as good as the people who work for us.

We began as a family company and have grown by keeping our family ethos. We go out of our way to create an environment that will develop, motivate and inspire our staff. Our workforce, recruited locally at all our sites, is integrated into a tight company structure, designed for fast and efficient decision making.

We operate continual staff development through an intensive in-house modular training programme. For instance, we have different in-house manuals for our drivers, with each driver undergoing a module for their speciality.

Training and development are constant factors for all our staff, from our screening teams to the people who operate our high-tech cleaning equipment, and their performance is constantly monitored too. That's on top of the national qualifications they need to attain.

Experience

As a multi-faceted company we have many decades of experience providing customers with solutions specially tailored to their needs.

Our transport arm specialises in tankers, moving large amounts of liquid and powder for multi-national household names and small family businesses alike. We've used our experience to build for the future.

With over 25 years of in-house engineering experience, we are constantly adapting and evolving our fleet to ensure it is the finest on the road. Our trucks and tankers are designed with input from the people who operate them and built by the talented engineers who work alongside them.

That experience extends to our cleansing and screening services too, where our teams have many years experience working in many different industrial environments.

We have a reputation for innovation, creating highly effective solutions to our customers' problems like our floating mixer and mobile screening & dewatering units see (Cleansing Solutions). We have designed our own state-of-the-art IT systems and vehicle tracking and in-cab real time data capture devices.

Resources

Based in five locations across the UK and Ireland, we have the resources it takes to respond efficiently and quickly to customer demand, however short the notice.

Our ultra modern transport fleet, which has an average age of just two and a half years, has been designed for maximum efficiency and safety, with ground level operation to reduce injury risk.

With a state-of-the-art garage, comprehensively equipped with the latest technology, our mechanics and engineers keep our fleet in the finest order, while our customers benefit from our industry leading equipment in all our areas of operation.

Our vacuum tankers, ranging from 44 tonne articulated lorries to small rigid vehicles, are a key part of our highly versatile recycling service.

We offer customers an extensive range of effective solutions for every cleansing and screening need.

service

100%

When you drive for BP McKeeefry you're very aware you are not just an ambassador for them but for their customers too. 100% reliability is crucial to that and so is flexibility. It's a big responsibility but it goes with the name.

Customer Service

Why do our customers stay with us, year after year? From blue chip companies familiar to every household to the smallest independent business, we are dedicated to providing the best possible service.

Our promise is simple – we deliver!

Our good name is everything to us and we work diligently to protect it. Whatever the cost to us, if we promise to deliver we will – safely, securely and right on time. Our customers can't afford delays – even minutes can cost – so from our back up teams to our drivers, everyone is focused on meeting your deadlines.

From the first contact with our friendly staff, we integrate ourselves into your team. We build our relationship with you, work out the service you need and deliver in partnership with you. We even design our own software to integrate with your computer network so you can easily access your orders and records.

We don't make exaggerated claims for our services. Instead, we say what we do and do what we say. That way our customers get a consistently high quality of service providing real value for money.

We only work with the best too. For instance, we have formed lasting relationships with our key suppliers so we can guarantee a secure service for all our customers.

Do we keep our promises?

With clear lines of communication, honed over decades, we can respond quickly and appropriately to each customer request. We understand that our customers' time is precious therefore we have developed a bespoke Customer Portal to provide access to real time information. This enables our customers to make decisions quickly and streamline their administration functions.

Our track record says it all. Customers come to us because of our name and they stay with us because of our service. From blue chip companies familiar to every household to the smallest independent business, we are dedicated to providing the best possible service.

Transport Solutions

We offer a range of high quality solutions that lead the way in food, industrial and chemical transportation. Our food tanks meet the requirements of the largest and most demanding food processing companies, while our industrial powder tanks are used by market leaders. Our ISO and chemical tanks surpass the most exacting standards in terms of safety, security and efficiency.

Food Tanks

Our food tanks are used by leaders in the food processing industry, covering a wide range of foods. Why? Because they know our trailers fulfil the demanding requirements of food transportation, while our operations are focused on the guaranteed delivery times that are essential to the industry.

To maintain the shelf lives of food products they must be transported at precise temperatures constantly maintained throughout the course of the journey. We also meet the highest standards of hygiene and product security.

Our customers are constantly moving product standards forward, advancing their own production and product safety systems. By creating transporting solutions that give our customers a competitive edge we become an integral part of this development process.

We also provide secure, cost effective transportation of high specification liquid foodstuffs, like milk or liquid sugar. We operate a large fleet of tankers specially designed for the transport of numerous alcoholic beverages such as whiskey, cider, wine and liquors, for a variety of blue chip customers.

Our procedures and systems are in line with HACCP, operating at all times within the SCOPA guidelines to ensure your products are safe in our care.

Powder Tanks

Our high capacity powder tanks are lightweight and silent, easy to clean and carry high volume discharge equipment as standard.

We continually invest in our tipping powder tank fleet, using the latest in design and technology to make sure we offer the ultimate in transportation for granulated or powder product requirements.

All our tanks are designed to allow maximum payloads with tank capacities ranging up to 65m³ to accommodate low density products.

Our powder fleet meets the requirements of the largest and most demanding food processing customers. Renowned within the sector, our industrial powder tanks are used by a variety of blue chip clients.

ISO Tanks

Modern and lightweight, our purpose built ISO tanks offer greater payloads, better temperature control and secure product integrity.

Because we organise and control the complete operation from collection to delivery we can offer the best response times and service levels to our customers.

Built to comply with ADR, RID and IMO standards, our tanks can hold up to 35,000 litres. They fully meet all health and safety requirements, while an enclosed lid and outlet ensures a greater load security. The use of steam coils also allows the heating of sensitive products, which are monitored with calibrated digital temperature gauges.

Chemical Tanks

Our ADR chemical tanks offer maximum payloads, guaranteed product integrity and operator safety. No wonder they are the choice of so many leading companies.

With experience in handling a wide range of liquid products, from transportation to storage, we have the knowledge and ability to move large amounts of low hazard products and classes 3, 6, 8 and 9.

Not only are our drivers and staff who handle dangerous goods ADR trained but we also have our own in-house NEBOSH certified Health, Safety and Environmental Adviser and a dedicated Dangerous Goods Safety Adviser. Needless to say, all our equipment meets the relevant ADR and IMO standards.

As an ISO 14001, ISO 9001, OHSAS 18001 and SQAS registered haulier you can be confident that your products are safe in our care.

Whether it's foodstuffs, chemicals, industrial goods, liquid or powder, we insist on the highest standards in safety, security, efficiency and hygiene. The latest in design and technology ensures our high capacity tankers carry large amounts of goods at precise and consistent temperatures. Add to that drivers and operations staff who ensure our deliveries are made on time, every time, and you can see why our customers return to us, again and again.

Peter Esler

Cleansing & Recycling Solutions

We offer customers a fantastic range of effective solutions for every cleansing and surveying need.

Jetting Units

Our high-pressure water jetting units are designed for the most effective cleaning of everything from sewers and culverts, wet-well's and gullies through to all sizes and types of tanks and lagoons.

The top quality performance comes from having high power vacuum pumps operating through suction booms of up to 8" diameter. Likewise, the jetting units operate at 2500psi whilst delivering 95 gallons per minute, ensuring our machines comfortably meet even the toughest of challenges.

It's not just our highly effective equipment that stands out either. Each unit is operated by a crew, trained in confined space entry to City & Guilds 6150-03 standard and the New Roads and Street Works Act 1991 (NRSWA) Signing, Lighting and Guarding (Chapter 8).

BPM De-Rag Pro (Mobile Screener – SBV01)

As a company that continually seeks to improve our operations and service delivery, our talented engineers consistently develop innovative solutions to our customers' problems. The De-Rag Pro is a prime example of this.

The De-Rag Pro is a self-contained mobile screening unit, which was designed and constructed in-house to process material containing high volumes of rag, fat, vegetation, paper, cardboard etc. The mechanical rake screen can also easily cope with product containing particularly high levels of rag being lifted directly on to the screen (no risk of blinding and throughput maintained).

The cleanliness of processed solids is industry leading which aids compaction, minimising vehicle movements and disposal costs. The potential savings that may be realised by the utilisation of the BPM De-Rag Pro is significant. If cleaning a typical tank containing around 500m³ of wet rag and organic matter with the BPM De-Rag Pro waste will be reduced by approximately 83% (415 tonnes).

BPM Tri-Screen Plus (Mobile Screener – SBV02)

Following on from the success of our BPM De-Rag Pro, we developed the BPM Tri-Screen Plus. This innovative 3 stage approach is specifically designed to process material with high volumes of rag, fat and grit.

The BPM Tri-Screen Plus achieves significantly advanced screening capability through a combination of rake separation and vibrating bed technology. Utilising a mechanical rake screen (patent pending) upstream effectively removes rag & fat, therefore allowing the vibrating beds and cyclone to efficiently remove finer solids including grit, bone, stone, sand, shells etc. Screening down to 0.1mm at a throughput of 60m³ per hour is readily achievable.

Solids removed in the process for disposal are also industry leading in terms of cleanliness and dryness, significantly reducing transport and disposal costs."

Vacuum Tanks

BP McKeefry vacuum tanks are the safest and most effective way to move liquid bio-solids from small to large sewage treatment works or, if appropriate, to land recycling.

Versatility is key to this work. Our ultra modern fleet, which ranges from 44 tonne articulated lorries to small rigid vehicles, combines maximum payloads of up to 30.5 tonnes with the ability to access small sites.

Confined Space Safety and Rescue Services providing you with confidence, assurance and performance.

Our confined space safety and technical rescue service delivers a dedicated technical rescue service you can rely on. Our team, which includes current serving front line emergency service personnel and technical rescue specialists, ensures your employees and contractors work in the safest environment possible at all times.

The team become totally integrated with your workforce to ensure a safe yet efficient working environment.

Special Projects Team

B.P.McKeefry also offers a "Special Projects Team", consisting of a multi-skilled, highly trained team of operatives with access to a variety of both off-the-shelf and bespoke plant and equipment enabling them to perform a wide range of tasks. These include, (but not limited to), Pipework jetting, sump and pit emptying, tank cleaning and wash-downs, confined space entry work (including working set breathing apparatus), sludge de watering / mixing and tanker assisted loading as well as product screening and separation. With years of experience to draw upon, the team often devise solutions to site cleansing problems beyond the capability of the competition.

Recycling

We take our responsibility to the planet very seriously and are constantly looking at ways to improve our impact on the environment. From installing wind turbines and photovoltaic panels to power our factory to using a bio mass boiler for heating, we think green at all times. As a transportation company we are constantly working to ensure our tankers are equipped with the latest technology to lower emissions, while we motivate our drivers to reduce fuel consumption as much as possible.

Our complete recycling services include the mixing, dewatering, injection and top spreading of bio-solids. We meet all national health and safety, quality and environmental standards, while our management systems ensure full traceability, immediate access to information via our customer portal and detailed volume movement reports from the in-cab data capture devices fitted to our vehicles.

Corporate and Social Responsibility

As a family business we understand that our operations have an impact on the wider community and we take our responsibility to our neighbours and the environment just as seriously as we do to our family of employees. From ensuring our employees achieve a happy work/life balance to fundraising for local charities and investing in green energy, we are dedicated to putting our family values into practice.

Accreditations and Awards

B.P. McKeefry are proud to be accredited with:

- ISO 9001:2008
- ISO 14001:2004
- OHSAS 18001:2007
- CEFIC Safety and Quality Assessment System (SQAS)
- Fleet Operator Recognition Scheme (FORS)
- Achilles
- SCOPA

Recent awards include:

- ROSPA Gold Achievement Award
- ROSPA Best New Entry Award
- ARENA Network Environmental Benchmarking Survey Gold Award
